

GUIDED PROJECT:

Streamlining Ticket Assignment for Efficient Support
Operations

DONE BY:

NAME: DWARAMPUDI S R G N V SASANK REDDY

ROLL NO: 322103310061

E-MAIL: 322103310061@gvpce.ac.in

1. Introduction

In today's fast-paced business environment, timely and accurate handling of IT support requests is essential for maintaining productivity and customer satisfaction. At ABC Corporation, the growing number of support tickets has made manual assignment inefficient, often resulting in delays, misrouted issues, and increased workload on support staff.

To overcome these challenges, this project focuses on implementing an automated ticket assignment system. By leveraging workflow automation and intelligent routing, the system will ensure that tickets are assigned to the right teams or individuals without manual intervention.

2. Project Objectives

The primary objective of this project is to implement an automated ticket assignment system at ABC Corporation that enhances the efficiency of IT support operations. The solution is designed to:

- Automate ticket routing to ensure accurate and timely assignment to the appropriate support teams.
- Reduce delays in issue resolution by minimizing manual intervention.
- Improve customer satisfaction through faster response times.
- Optimize resource utilization by balancing workloads across support teams.
- Enhance operational transparency with clear assignment logic and reporting.

3. Key Features

Automated Routing – Tickets assigned to the right team/person.

Dynamic Rules – Configurable logic based on category, priority, etc.

Load Balancing – Distributes workload evenly across teams.

Escalation Support – Auto-escalates tickets nearing SLA breach.

Notifications – Real-time alerts for quicker response.

Analytics – Reports on ticket flow and team performance.

4. ServiceNow Developer Setup

1. Go to ServiceNow Developer Portal(<https://developer.servicenow.com/dev.do>).
2. Sign up for a free developer account and fill the following details.
3. Verify your email and log in to the Developer Portal.
4. Request a Personal Developer Instance (PDI).
5. Use App Engine Studio/Creator Studio to build applications.
6. Manage account, request instances, and check developer profile from the Profile Icon.

Hello, DWARAMPUDI S R G N V

Welcome to ServiceNow!

Start using ServiceNow's powerful Now Platform to build applications that make work better for your organization.

[Start Building](#)

5. Detailed Project Implementation

5.1 Creating Users:

Users are the foundation of ServiceNow because they represent the individuals who interact with the system—such as employees, customers, or administrators. Defining users properly ensures secure access, role assignment, and accurate ticket ownership.

Steps to Create a User in ServiceNow:

1. In the left navigation panel, click on All and search for Users.
2. Under System Security, select Users.
3. Click New to open a new user form.
4. Fill in the following mandatory details:
 - First Name
 - Last Name
 - User ID (unique identifier)
 - Email Address
 - Password (set securely for login)
 - Roles (optional at this stage)
5. Click Submit to save the user.

Example:

- First User: Katherine Pierce (support team member for certification issues).

The screenshot shows the 'User - New Record' form in ServiceNow. The form is divided into two main sections. The left section contains fields for User ID (Katherine Pierce), First name (Katherine), Last name (Pierce), Title (empty), and Department (empty with a search icon). Below these are checkboxes for 'Password needs reset', 'Locked out', 'Active' (checked), 'Web service access only', and 'Internal Integration User'. The right section contains fields for Email (empty), Language (-- None --), Calendar integration (Outlook), Time zone (System (America/Los_Angeles)), Date format (System (yyyy-MM-dd)), Business phone (empty), and Mobile phone (empty). A 'Photo' field with a 'Click to add...' link is also present. A 'Submit' button is at the bottom left.

- Second User: Manne Niranjana (support team member for platform-related issues).

The screenshot shows the 'User - New Record' form in ServiceNow for a second user. The form is identical in layout to the first one. The left section contains fields for User ID (manne.niranjana), First name (Manne), Last name (Niranjana), Title (empty), and Department (empty with a search icon). Below these are checkboxes for 'Password needs reset', 'Locked out', 'Active' (checked), 'Web service access only', and 'Internal Integration User'. The right section contains fields for Email (empty), Language (-- None --), Calendar integration (Outlook), Time zone (System (America/Los_Angeles)), Date format (System (yyyy-MM-dd)), Business phone (empty), and Mobile phone (empty). A 'Photo' field with a 'Click to add...' link is also present. A 'Submit' button is at the bottom left.

By creating these users, we are setting up distinct identities that will later be linked to specific groups and roles. This ensures accountability, controlled access, and seamless ticket assignment during the automation process.

5.2 Creating Groups:

Groups in ServiceNow represent a collection of users who share common responsibilities, such as handling specific categories of support tickets. By creating groups, we ensure that tickets can be routed to teams rather than individuals, improving workload distribution and collaboration.

Steps to Create a Group in ServiceNow:

1. In the left navigation panel, click on All and search for Groups.
2. Under System Security, select Groups.

3. Click New to open a new group form.
4. Fill in the required details:
 - Name – A unique name for the group (e.g., Certificates Group).
 - Description – A short summary of the group's purpose (e.g., Handles certificate related issues).
 - Manager – Assign a manager (optional but recommended for accountability).
5. Click Submit to save the group.
6. Repeat the process to create additional groups as required.

Example Groups:

- Certificates Group – Responsible for handling all certificate-related issues.

The screenshot shows the 'Group - New Record' form in ServiceNow. The browser address bar shows the URL: dev339242.service-now.com/now/nav/ui/classic/params/target/sys_user_group.do%3Fsys_id%3D-1%26sys_is_list%3Dtrue%26sys_target... The form has a dark header with the ServiceNow logo and navigation tabs: All, Favorites, History, Admin. The main title is 'Group - New Record' with a star icon. A search bar is on the right. Below the header, there's a breadcrumb 'Group New record' and a 'Submit' button. The form fields are: Name (certificates), Group email (empty), Manager (Katherine Pierce), Parent (empty), and Description (empty). A 'Submit' button is at the bottom left.

- Platform Group – Responsible for platform login issues, errors, and account-related problems.

The screenshot shows the 'Group - New Record' form in ServiceNow for the Platform Group. The browser address bar shows the URL: dev339242.service-now.com/now/nav/ui/classic/params/target/sys_user_group.do%3Fsys_id%3D-1%26sys_is_list%3Dtrue%26sys_target... The form has a dark header with the ServiceNow logo and navigation tabs: All, Favorites, History, Admin. The main title is 'Group - New Record' with a star icon. A search bar is on the right. Below the header, there's a breadcrumb 'Group New record' and a 'Submit' button. The form fields are: Name (Platform), Group email (empty), Manager (Manne Niranjana), Parent (empty), and Description (empty). A 'Submit' button is at the bottom left.

By defining groups, tickets can be routed to specialized teams, ensuring that problems are resolved by experts in that domain.

5.3 Creating Roles:

Roles in ServiceNow define what actions a user or group can perform. They act as permission sets that grant access to specific tables, applications, or features. Assigning the right roles ensures that users only see and act upon information relevant to their responsibilities.

Steps to Create a Role in ServiceNow:

1. In the left navigation panel, click on All and search for Roles.
2. Under System Security, select Roles.

3. Click New to open a new role form.
4. Fill in the required details:
 - Name – A unique role identifier (e.g., Certificate_role).
 - Description – A short explanation of the role's purpose (e.g., Provides access to handle certificate-related tickets).
5. Click Submit to save the role.
6. Repeat the process to create additional roles as required.

Example Roles:

- Certificate_role – Grants access to users who resolve certificate-related support tickets.

The screenshot shows the 'Role - New Record' form in ServiceNow. The browser address bar shows a URL with a long ID. The form has a dark header with 'servicenow' logo, navigation links (All, Favorites, History, Admin), and a search bar. The main form area has a light blue background. It includes a 'Name' field with the value 'Certification_role', an 'Application' dropdown set to 'Global', and an 'Elevated privilege' checkbox which is unchecked. The 'Description' field contains the text 'can deal with certification issues'. A 'Submit' button is located at the bottom left of the form.

- Platform_role – Grants access to users handling platform login and error-related issues.

The screenshot shows the 'Role - New Record' form in ServiceNow for a different role. The browser address bar shows a similar URL. The form fields are: 'Name' is 'Platform_role', 'Application' is 'Global', 'Elevated privilege' is unchecked, and 'Description' is 'can deal with platform related issues'. A 'Submit' button is at the bottom left.

By assigning roles, we ensure proper access control, security, and accountability, allowing only authorized users or groups to work on specific categories of tickets.

5.4 Creating Table & Choices:

Tables in ServiceNow act as the backbone of data storage. Each table stores a set of records (such as support tickets) with fields like issue type, description, status, and assigned group. For this project, we will create a custom table called Operations related to manage support tickets effectively.

Steps to Create a Table in ServiceNow:

1. In the left navigation panel, click on All and search for Tables.
2. Under System Definition, select Tables.
3. Click New to open a new table form.

4. Fill in the following details:

- Label: Operations related
- Create module → Checked
- Create mobile module → Checked
- New menu name: Operations related

5. Define the required table columns (e.g., Issue, Description, Assigned To, Status).

6. Click Submit to save the table.

Adding Choices for the “Issue” Field:

To standardize ticket creation and enable automation, we add predefined choices to the Issue field

using Form Design.

1. Navigate to the created table and select Form Design.

2. Open the Issue field.

3. Add the following choices:

- Unable to login to platform
- 404 error
- Regarding certificates
- Regarding user expired

4. Save the form design.

dev339242.service-now.com/now/nav/ui/classic/params/target/sys_db_object.do%3Fsys_id%3D-1%26sys_is_list%3Dtrue%26sys_target%...

servicenow All Favorites History Admin Table - New Record Search

Table New record Submit Cancel

A table is a collection of records in the database. Each record corresponds to a row in a table, and each field on a record corresponds to a column on that table. Applications use tables and records to manage data and processes. [More Info](#)

* Label Operations related Application Global ⓘ

* Name u_operations_related Create module ☒

Remote Table ☐

5.5 Assigning Users & Roles to Groups:

After creating users, groups, and roles, the next step is to link them together. This ensures that each user belongs to the correct group and is given the proper role permissions. By doing this, tickets can be routed seamlessly to the right teams.

5.5.1 Certificates Group:

1. In the left navigation panel, click on All and search for Groups.
2. Under System Security, select Groups.
3. Open the Certificates Group created earlier.

4. Under the Group Members tab:

- Click Edit.
- Select Katherine Pierce from the user list.
- Click Save.

5. Under the Roles tab:

- Click Edit.
- Select Certificate_role.
- Click Save.

Now, Katherine Pierce is a member of the Certificates Group and can handle certificate-related tickets.

The screenshot shows the ServiceNow interface for a group named 'certificates'. At the top, there's a navigation bar with 'Group - certificates' and a search bar. Below the navigation bar, there's a status bar indicating 'Job to add or remove role(s) from user(s) of group has been queued'. The main form has fields for 'Name' (certificates), 'Group email', 'Manager' (Katherine Pierce), and 'Parent'. Below the form, there are 'Update' and 'Delete' buttons. The 'Group Members' tab is active, showing a list of users. The list has a search bar and a 'User' dropdown. The user 'Katherine Pierce' is listed as a member of the group.

5.5.2 Platform Group:

1. In the left navigation panel, click on All and search for Groups.

2. Under System Security, select Groups.

3. Open the Platform Group created earlier.

4. Under the Group Members tab:

- Click Edit.
- Select Manne Niranjana from the user list.
- Click Save.

5. Under the Roles tab:

- Click Edit.
- Select Platform_role.
- Click Save.

Now, Manne Niranjana is part of the Platform Group and authorized to resolve platform-related tickets.

dev339242.service-now.com/now/nav/ui/classic/params/target/sys_user_group.do%3Fsys_id%3Deeb1130183807210359631b6feaad372...

Manne Niranjana

5.6 Assigning Roles to Tables:

Once the table is created, it is important to control who can read and write records within it. By assigning roles to the Operations related table, we ensure that only authorized groups (Platform and Certificates) can access and update tickets. This improves security, accountability, and data integrity.

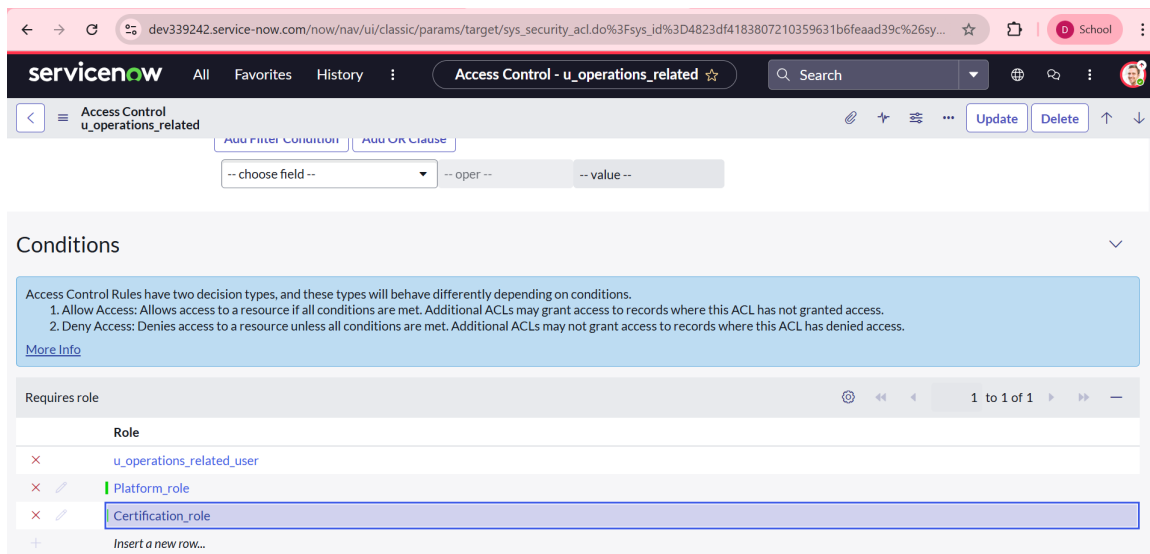

Steps to Assign Roles to the Table:

1. In the left navigation panel, click on All and search for Tables.
2. Under System Definition, select Tables.
3. Open the Operations related table created earlier.
4. Navigate to the Application Access tab.
5. Click on your profile (top-right corner) → Elevate Role → select security_admin → click Update.
6. Under u_operations_related [Read] operation:
 - In the Requires Role section, double-click to insert a new row.
 - Add Platform_role and Certificate_role.

7. Under u_operations_related [Write] operation:

- In the Requires Role section, double-click to insert a new row.
- Add Platform_role and Certificate_role.
- Click Update.

5.7 Creating ACLs:

Access Control Lists (ACLs) in ServiceNow provide fine-grained security by controlling access to specific tables, records, and fields. While assigning roles to tables gives broader access, ACLs allow us to define exact permissions for who can read, write, or update particular fields within the table.

Steps to Create an ACL in ServiceNow:

1. In the left navigation panel, click on All and search for ACL.
2. Under System Security, select Access Control (ACL).
3. Click New to create a new ACL.
4. Fill in the required details:

- Table – Select the table (e.g., Operations related).
- Operation – Choose the operation (Read, Write, Create, Delete).
- Field – Specify a field if needed (e.g., Issue).

5. Scroll down to the Requires Role section:

- Double-click to insert a new row.
- Add the admin role (or another role as required).

6. Click Submit to save the ACL.

Example ACLs for This Project:

- Field: Issue – Access restricted to admin.
- Field: Priority – Access restricted to admin.
- Field: Ticket Raised Date – Access restricted to admin.
- Field: Status – Access restricted to admin.

u_operations_related.u_priority	Allow If	write	record	true	admin
u_operations_related.u_issue	Allow If	write	record	true	admin
u_operations_related.u_name	Allow If	write	record	true	admin
u_operations_related.u_ticket_raised_date	Allow If	write	record	true	admin
u_operations_related.u_service_request_no	Allow If	write	record	true	admin
u_operations_related	Allow If	delete	record	true	admin

5.8 Creating Flows for Ticket Assignment:

Flows in ServiceNow automate actions based on triggers. In this project, we use Flow Designer to automatically assign tickets in the Operations related table to the correct support group, based on the issue type selected by the user.

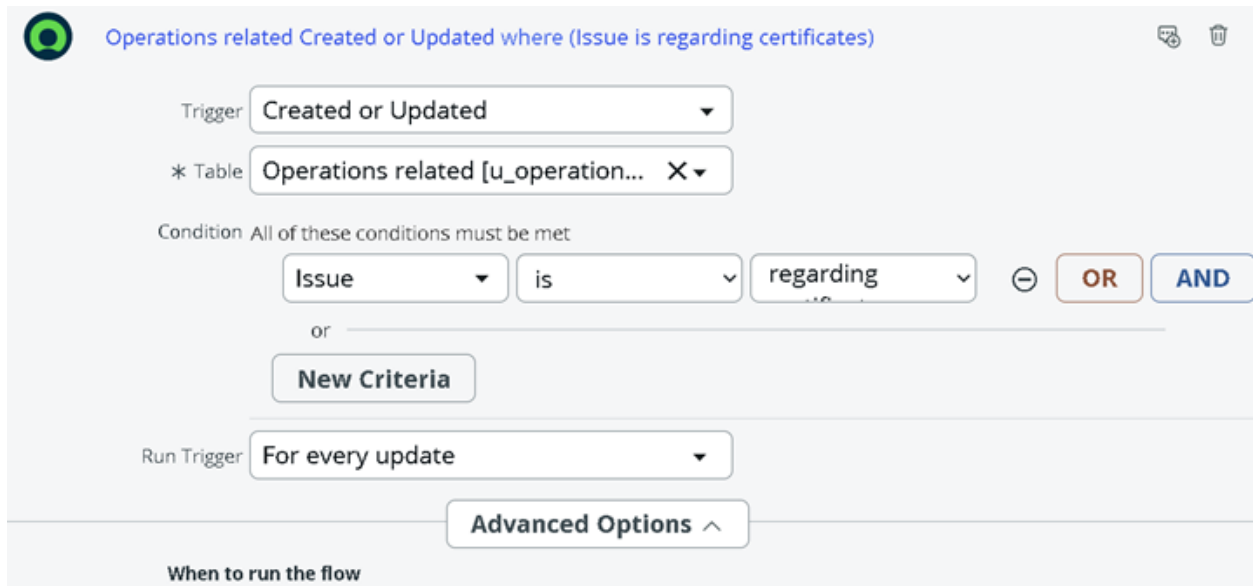

By setting up these flows, we eliminate manual ticket routing, reduce delays, and ensure that tickets always reach the right team.

5.8.1 Assign Tickets to the Certificates Group:

Steps:

1. Navigate to All → Flow Designer under Process Automation.
2. Click New → Flow.
3. Configure Flow Properties:
 - Flow Name: Regarding Certificate
 - Application: Global
 - Run As User: System User
 - Click Submit.
4. Add a Trigger:

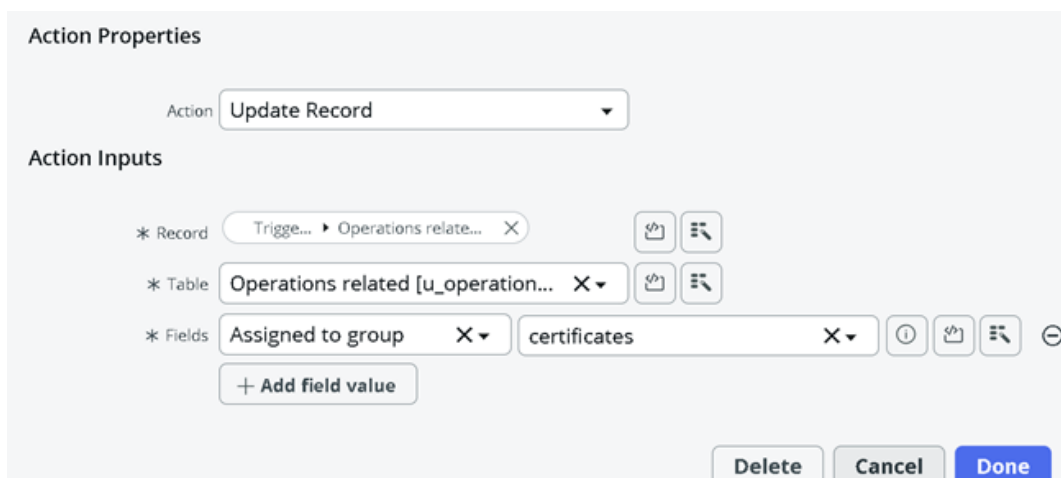

- Click Add a Trigger → search for Create or update a record.
- Configure:
 - Table: Operations related
 - Condition: Issue is “Regarding Certificates”
- Click Done.

The screenshot shows a configuration window titled "Operations related Created or Updated where (Issue is regarding certificates)". It includes a "Trigger" dropdown set to "Created or Updated", a "Table" dropdown set to "Operations related [u_operation...]", and a "Condition" section with a dropdown set to "Issue", a connector set to "is", and a value set to "regarding". There are also "OR" and "AND" buttons. Below the condition is a "Run Trigger" dropdown set to "For every update" and an "Advanced Options" button.

5. Add an Action:

- Click Add an Action → search for Update Record.
- Configure:
 - Table: Auto-assigned from trigger
 - Field: Assigned to Group
 - Value: Certificates
- Click Done.

The screenshot shows the "Action Properties" window for the "Update Record" action. It includes an "Action" dropdown set to "Update Record" and an "Action Inputs" section. The "Record" input is set to "Trigge... ▶ Operations relate...", the "Table" input is set to "Operations related [u_operation...", and the "Fields" input is set to "Assigned to group" with a value of "certificates". There are also "Delete", "Cancel", and "Done" buttons at the bottom.

6. Save and Activate the Flow.

Now, any new ticket with the issue “Regarding Certificates” is automatically routed to the Certificates Group.

5.8.2 Assign Tickets to the Platform Group:

Steps:

1. Navigate to All → Flow Designer under Process Automation.
2. Click New → Flow.
3. Configure Flow Properties:
 - Flow Name: Regarding Platform
 - Application: Global
 - Run As User: System User
 - Click Submit.
4. Add a Trigger:
 - Click Add a Trigger → search for Create or update a record.
 - Configure:
 - Table: Operations related
 - Conditions:
 - Issue is "Unable to login to platform"
 - OR Issue is "404 Error"
 - OR Issue is "Regarding User expired"
 - Click Done.

TRIGGER

Operations related Created or Updated where (Issue is unable to login to platform; Issue is 404 error...

Trigger: Created or Updated

* Table: Operations related [u_operation... X

Condition All of these conditions must be met

Issue is unable to login

or

All of these conditions must be met

Issue is 404 error

or

All of these conditions must be met

5. Add an Action:
 - Click Add an Action → search for Update Record.
 - Configure:
 - Table: Auto-assigned from trigger
 - Field: Assigned to Group
 - Value: Platform
 - Click Done.

ACTIONS Select multiple

6. Save and Activate the Flow.

Now, all tickets related to platform issues are automatically routed to the Platform Group.

6. Conclusion

The implementation of the automated ticket assignment system at ABC Corporation has transformed the way support operations are managed. By leveraging the capabilities of ServiceNow, the project successfully addressed the challenges of manual ticket routing, misallocation of requests, and delayed response times. Through the creation of users, groups, roles, tables, ACLs, and automated flows, the support process is now:

- Faster – Tickets are instantly routed to the appropriate support group.
- Accurate – Manual errors in assignment are eliminated.
- Efficient – Resources are better utilized through balanced workloads.
- Customer-focused – Faster resolution times lead to improved customer satisfaction.

This initiative not only streamlined internal operations but also strengthened trust with end-users by ensuring that issues are resolved promptly and by the right teams. It demonstrates how automation in IT Service Management (ITSM) can reduce administrative overhead and empower support staff to focus on problem-solving rather than manual processes. Ultimately, the project highlights ServiceNow's potential as a powerful platform for enhancing operational efficiency, ensuring accountability, and delivering high-quality IT support services.
